Thank you for purchasing my theme. If you have any questions that are beyond the scope of this help file, please feel free to email via my user page contact form here. Thanks so much!

Customisation of a css/html template will of course require some knowledge of css/html as well as Photoshop for image manipulation and for exporting modified elements from the PSD files.

If you require help getting started with HTML/CSS, please consider visiting the following links:

http://www.w3schools.com/Css/default.asp

HTML Structure

#content_wrapper - This is the first element acting as a wrapper for the whole content.
   #header - contain header of page
      #logo - contain logo image
      #search - contain search form
      #account_info - contain account information
   #left_menu - contain left slider menu
      #calendar - contain calendar selector
   #content - the wrapper of contents
        #shortcut - contain all shortcut icons
      #shortcut_notifications - contain all shortcut notifications circle
      .onecolumn - wrapper of one column windows
        .header - header of one column window
        .content - content of one column window
      .twocolumn - wrapper of two column windows
        .header - header of two column window
        .content - content of two column window
      .threecolumn - wrapper of three column windows
        .header - header of three column window
        .content - content of three column window
   #footer - contain footer of panel

CSS Files and Structure

I'm using 6 CSS files.

1. The first one contains all of the specific stylings for the template. The file is separated into sections using:

```
/*
CSS Reset
*/

some code

/*
    General elements styles
*/

some code

/*
    Input elements style
*/

some code

/*
    WYSIWYG textarea
*/

some code

/*
    Login layout
*/

some code

/*
    Dashboard header layout
*/

some code

/*
    Dashboard left panel layout
*/

some code

/*
    Dashboard shortcut
```

```
*/

some code

/*
    Dashboard window one column layout
*/

some code

/*
    Dashboard window two column layout
*/

some code

/*
    Dashboard window three column layout
*/

some code

/*
    Alert box layout
*/

some codde

/*
    Photos listing layout
*/

some code

/*
    Pagination style
*/

some code

/*
    Modal window layout
*/

some code

/*
    Footer layout
*/

some code
```

If you would like to edit a specific section of the site, simply find the appropriate label in the CSS file, and then scroll down until you find the appropriate style that needs to be edited.

2. The second one contains all of the specific stylings for the calendar and datepicker element.
3. The third one contains all of the specific stylings for the graphs.
4. The fourth one contains all of the specific stylings for the wysiwyg textarea.
5. The fifth one contains all of the specific stylings for the modal window.
6. The sixth one contains all of the specific stylings for the tooltips.

Javascript

This theme imports nine Javascript files.

1. jQuery
2. jQuery UI
3. preloadCssImages plugin
4. Hint plugin
5. visualize plugin
6. wysiwyg plugin
7. fancybox plugin
8. tipsy plugin (tooltips)
9. custom javascripts

1. jQuery is a Javascript library that greatly reduces the amount of code that you must write.
2. jQuery UI contain some effects and UI features that greatly reduces the amount of code that you must write.
3. preloadCssImages plugin preload all images included in CSS.
4. Hint plugin create text helper for input text (in search box) here is the example usage.
5. Use to draw graphs from table data
6. Create rich wysiwyg textarea
7. Create modal window
8. Create inline tooltips
9. Create custom functions and setup all elements in the page

# Skins

This theme have 4 skins Blue, Black, Red and Green.

- **Blue skin:**
  - HTML files: login_blue.html, dashboard_blue.html
  - CSS files: /css/blue/*
  - Images files: /images/blue/*
  - Custom javascript file: /js/custom_blue.js

- **Black skin:**

- ◦ HTML files: login_black.html, dashboard_black.html
- ◦ CSS files: /css/black/*
- ◦ Images files: /images/black/*
- ◦ Custom javascript file: /js/custom_black.js

- **Red skin:**
  - ◦ HTML files: login_red.html, dashboard_red.html
  - ◦ CSS files: /css/red/*
  - ◦ Images files: /images/red/*
  - ◦ Custom javascript file: /js/custom_red.js

- **Green skin:**
  - ◦ HTML files: login_green.html, dashboard_green.html
  - ◦ CSS files: /css/green/*
  - ◦ Images files: /images/green/*
  - ◦ Custom javascript file: /js/custom_green.js

Features

Here are how to implement some of theme's features.

Setup left slider menu

Slider menu using Jquery UI Accordion
http://jqueryui.com/demos/accordion/

```
$('#main_menu').accordion({
    collapsible: true
});
```

Calendar and datepicker

Calendar and datepicker use jQueryUI datepicker. You can also change style in CSS file **/css/datepicker.css**

```
$("#calendar").datepicker({
    nextText: '&raquo;',
    prevText: '&laquo;'
});

// Setup datepicker input
$("#datepicker").datepicker({
    nextText: '&raquo;',
    prevText: '&laquo;',
    showAnim: 'slideDown'
});
```

Shortcuts and notifications

You can create shortcut button by using <ul id="shortcuts"> elements which contain 40x40 px icon inside. To add notification red circle to each shortcuts simple add **{notification number}**

Example:
below are example shortcuts

```
<ul id="shortcut">
    <li>
        <a href="" id="shortcut_home">
            <img src="images/shortcut/home.png" alt="home"/><br/>
            <strong>Home</strong>
        </a>
    </li>
    <li>
        <a href="" id="shortcut_posts">
            <img src="images/shortcut/posts.png" alt="posts"/><br/>
            <strong>Posts</strong>
        </a>
    </li>
</ul>
```

Here are notification code

```
<div id="shortcut_notifications">
    <span class="notification" rel="shortcut_home">10</span>
    <span class="notification" rel="shortcut_posts">1</span>
</div>
```
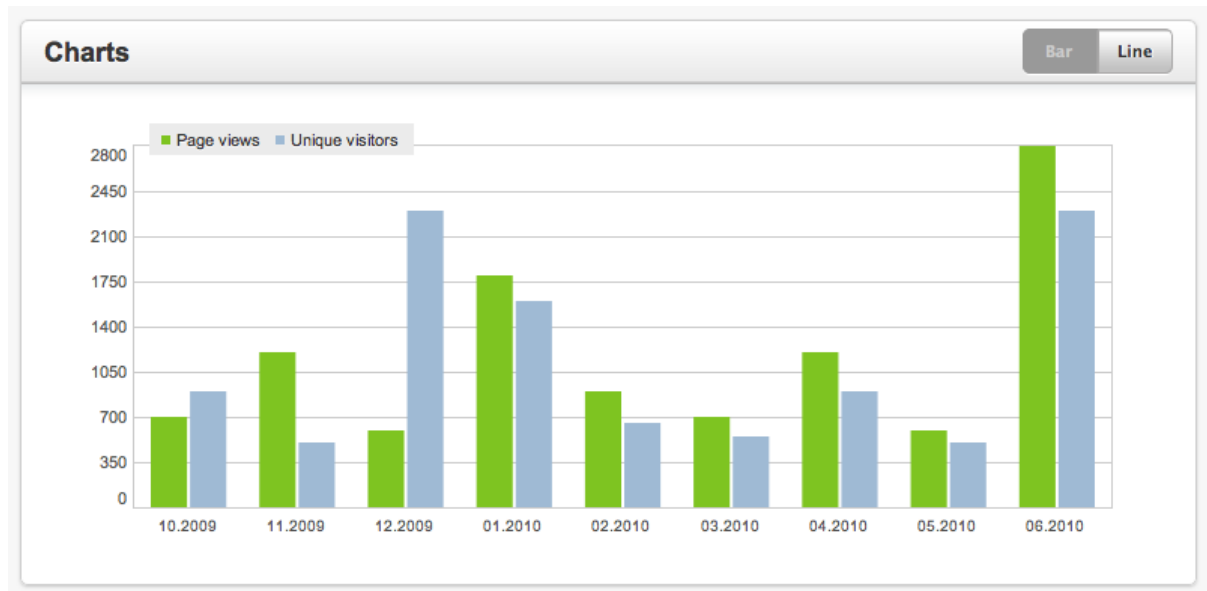

Adding custom javascript code (already in custom.js)

```
function setNotifications()
{
    // Setup notification badges for shortcut
    $('#shortcut_notifications span').each(function() {
    if($(this).attr('rel') != '')
    {
        target = $(this).attr('rel');
        if($('#' +target).length > 0)
        {
            var Ypos = findPosY(document.getElementById(target));
            var Xpos = findPosX(document.getElementById(target));
            $(this).css('top', Ypos-24 +'px');
            $(this).css('left', Xpos+60 +'px');
        }
    }
```

```
        });

        $('#shortcut_notifications').css('display', 'block');
    }
```

Charts and graphs

Basically it use javascript to load data from specified <table> and draw into page. Below is example code

```
$('table.stats').each(function() {
    // Charts options are 'bar', 'area', 'pie', 'line'
    var statsType;
    if($(this).attr('rel')) {
        statsType = $(this).attr('rel');
    }
    else
    {
        statsType = 'bar';
    }

    $(this).hide().visualize({
        type: statsType,
        width: '650px',
        height: '240px',
        colors: ['#7EC421', '#9FBAD4']
    }).appendTo('#' +statsType);
});
```

Above code will get all data in table which has class name "stats" and draw into space,

with 650 px width and 240px height (In this case has 2 different data type). It gets chart type in table's attribute "rel". All chart options are "bar", "area", "pie" and "line"

Modal window

Here are the example of how to setup modal window. You can also customize style of window in /js/fancybox/jquery.fancybox-1.3.0.css

```
$('.media_photos li a[rel=slide]').fancybox({
    padding: 0,
    transitionIn: 'elastic',
    transitionOut: 'elastic',
    titlePosition: 'outside',
    overlayColor: '#333333',
```

```
        overlayOpacity: .2
    });
```

Above code will add modal window to all anchors inside <ul class="media_photos">
... with custom options. For more options visit http://fancybox.net/api

Photoshop files and Graphic sources

The source files for this skin are located in the /PSD folder.
We have used default fonts in the design process Arial
